Planting Perennials

Today on Gardening in a Minute: planting perennials.

Perennials can add excitement to any landscape with their color and versatility. They're defined as plants that can live for two or more growing seasons.

In parts of Florida, your perennials may die back to the ground at various times of the year and may re-grow. However, many people choose to treat their perennials as annuals.

Perennials have endless varieties of colors, sizes, growth habits, and blooming times. There are perennials to fit almost any landscape situation. Grow them from seed or cuttings, or purchase small seedlings for transplant.

There are perennials to fit all light conditions and soil types. Select plants that are suited to the growing conditions where they will be placed.

Discover the wide world of perennials for an ever-rewarding garden!

For more information on perennials, contact your county Extension office or visit Gardening in a Minute dot com.

Gardening in a Minute is a production of the University of Florida's Environmental Horticulture Department, IFAS Extension, and WUFT-FM.
